

Facebook Ads Performance Analysis

Tools

Python, Pandas, Matplotlib, Seaborn

Description

Developed comprehensive data analysis of Facebook advertising campaign performance, examining daily ad spend trends, ROMI metrics, campaign efficiency, and correlations between key performance indicators using statistical visualizations and regression analysis.

My Tasks

- Time-series data aggregation and rolling average calculations
 - Campaign-level performance comparison and metrics visualization
 - Distribution and variability analysis using box plots and histograms
 - Correlation analysis and regression modeling
 - Multi-dimensional performance insights across campaigns
-

Result

- Created 6+ visualizations revealing daily spend patterns and ROMI trends in 2021
 - Identified campaign efficiency metrics and performance distribution characteristics
 - Discovered correlation patterns between ad spend and revenue generation
 - Established linear regression model showing relationship between spending and return value
 - Provided data-driven insights for advertising budget optimization
-
